18 AAC 70 Alaska Water Quality Standards (amended as of April 6, 2018) - (14) Bacteria, For Marine Water Uses

(B) Water Recreation (i) contact recreation	In a 30-day period, the geometric mean of samples may not exceed 35 enterococci CFU/100 ml, and not more than 10% of the samples may exceed a STV of 130 enterococci CFU/100 ml.
(B) Water Recreation (ii) secondary recreation	In a 30-day period, the geometric mean of samples may not exceed 200 fecal coliform/100 ml, and not more than 10% of the samples may exceed 400 fecal coliform/100 ml.
(D) Harvesting for Consumption of Raw Mollusks or Other Raw	The geometric mean of samples may not exceed 14 fecal coliform/100 ml; and not more than 10% of the samples may exceed 31 CFU per 100 ml for a membrane filtration test.

Tides focus is on either side of low tide, using ebb and flow stages

FC = fecal coliform bacteria

Enter = enterococci

() shows duplicate results

[] shows alternating monitoring locations; Rotary - Pool or Beach, and Mountain Point - SurpriseBeach or Cultural Foods locations.

CFU - colony forming units

MPN - most probable number

STV - statistical threshold value

CONF - Confluent Growth
